Recommendation of Poul Sørensen

I know Poul Sørensen from his job as a teaching assistant at DTU in the course Introductory Programming with Matlab, where he has acted as teaching assistant several times since 2010, and where he has interacted with several teachers of that course: Vedrana Andersen, Christian Thode Larsen, Jørgen Sand, and myself.

Poul Sørensen has a solid background in programming, and he has a talent for communication and interaction with students that find the abstractions of programming difficult. He is very reliable, talented, and thorough, which has been assessed through his careful grading of the student projects, as well as his continued efforts towards improvement of the material used during exercises, projects, and grading. I find Poul Sørensen to be in the top 10% of the teaching assistants I have come across.

Best regards,

Per Christian Hansen
Professor
Scientific Computing
